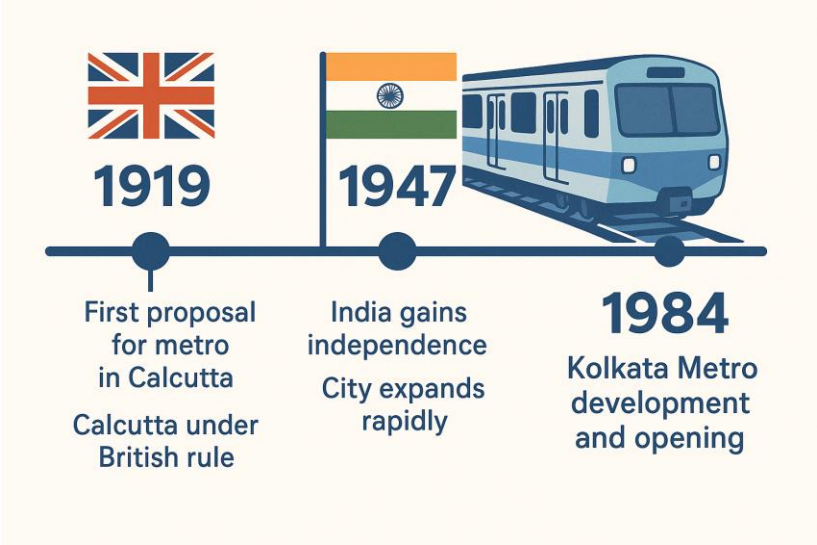
India's first metro system has a story that spans over a century - from British colonial plans in 1919 to becoming the country's most advanced underground railway network. This is the fascinating journey of Kolkata Metro, a tale of perseverance, politics, and progress that transformed how millions travel in the City of Joy.



The British Dreams That Never Materialized (1919-1923)

- The story begins not in independent India, but during British rule. Picture this: it's 1919, and British officials are sitting in Shimla, dreaming of an underground railway for Calcutta that would rival London's Underground. Sir W.E. Crum, a member of the Imperial Legislative Council, had a grand vision - a 10.4 km metro line that would tunnel beneath the mighty Hooghly River, connecting East Bengal Railway in Bagmari to East Indian Railway in Benaras Road.
- The price tag? A whopping £3.5 million (equivalent to ₹70 billion today!). Train tickets would cost just 3 annas for the full journey. But here's the twist - this wasn't just any ordinary proposal. The British had already seen the success of London Underground since 1863, and they knew Calcutta needed something similar.
- In 1921, the British brought in the big guns. Enter Sir Harley Dalrymple-Hay, a Bengal-born British engineer who was working on London's Underground system. Ironically, this man who would design Calcutta's metro had never even set foot in the city! He sent his assistant to gather information and created detailed plans in his famous 1921 book "Calcutta Tube Railways".
- But dreams don't always come true. By 1923, the British shelved the entire project. Why? Money problems and doubts about Calcutta's "alluvial, clayey and lazy" soil. Little did they know that exactly 100 years later, their underwater tunnel dream would finally become reality !

Make in Progress....

The Long Wait and False Starts (1949-1969)

- After Independence, the metro idea kept coming back like a stubborn ghost. In 1949, West Bengal's Chief Minister Dr. Bidhan Chandra Roy thought, "Why not revive this metro idea?". He brought in French experts to survey the city, but nothing concrete happened.
- The problem was getting worse by the day. Calcutta's roads covered only 4.2% of the city's surface area, compared to 25% in Delhi and 30% in other cities. Imagine trying to move millions of people through such narrow streets! Traffic was becoming a nightmare, and simply adding more buses wasn't solving anything.

The Soviet Connection and Real Progress (1969-1972)

- Finally, in 1969, something serious happened. The Metropolitan Transport Project (MTP) was born under Indian Railways. This time, India looked east for help - to the Soviet Union. Soviet specialists from Lenmetroproekt, along with East German engineers, created an ambitious master plan in 1971.
- Their vision was breathtaking: five metro lines covering 97.5 km across Calcutta. But being practical, they chose three lines for immediate construction:
- Dum Dum to Tollygunge (the most crucial north-south route)
- Bidhannagar to Ramrajatala
- Dakshineswar to Thakurpukur
- The highest priority went to the busiest corridor - Dum Dum to Tollygunge, stretching 16.45 km. This would become India's first metro line.

Indira Gandhi's Historic Gesture (1972)

- December 29, 1972 - mark this date in history! On a cold winter day, Prime Minister Indira Gandhi laid the foundation stone for India's first metro project. This wasn't just a ceremony; it was the birth of modern urban transportation in India.

- Construction officially began in 1973-74, but this was uncharted territory. Unlike the later Delhi Metro which had international consultants, Kolkata Metro was a completely indigenous experiment - a true trial-and-error affair. They used traditional cut-and-cover methods and shield tunneling, with technology provided by NIKEX Hungarian Company from Budapest.

The Dark Years and Political Turmoil (1977-1980)

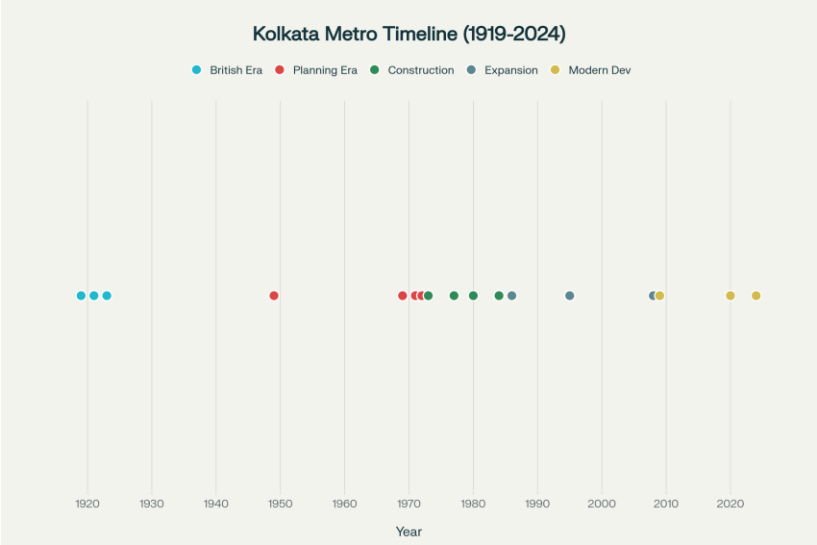
- Just when things were getting started, politics stepped in. In 1977, Indira Gandhi lost power, and the new Janata Party government practically stopped funding the project. The same year, the Left Front came to power in West Bengal under Jyoti Basu.

- Imagine the frustration! Construction workers had dug up half the city, creating a massive mess, and suddenly there was no money to continue. Court cases piled up, materials became scarce, and the project seemed doomed

The Bengali Hero Who Saved the Metro (1980-1984)

- When Indira Gandhi returned to power in 1980, she appointed a young Bengali leader as Railway Minister - Abu Barkat Ataur Ghani Khan Choudhury (A.B.A. Ghani Khan Choudhury). This man became the unsung hero of Kolkata Metro.

- Choudhury took extraordinary measures to complete the project. He fought bureaucracy, secured funding, and pushed for completion by 1983. Thanks to his efforts, the dream finally became reality.



Steady Growth and Expansion (1984-2008)

- October 24, 1984 - Diwali day - India made history. The first metro train rolled into Esplanade station, driven by Tapan Kumar Nath and Sanjoy Kumar Sil. The inaugural stretch covered just 3.4 km from Esplanade to Bhowanipur (now Netaji Bhavan), with five stations.
- The fare? Just ₹1 for the entire journey. The 3.4 km trip took about 8 minutes. Kolkata became the 65th city worldwide to have an underground metro system.
- Interestingly, neither the Prime Minister, Chief Minister, nor Railway Minister attended the opening ceremony. Instead, Khagendra Narayan Dasgupta, the General Manager of Metro Railway, broke a coconut at Esplanade station in front of a cheering crowd. Sometimes, the most historic moments happen with the simplest ceremonies

- The metro didn't stop at 3.4 km. Within a month, another stretch between Dum Dum and Belgachhia opened. By April 1986, the network had grown to 9.79 km with 11 stations. The complete north-south line from Dum Dum to Tollygunge was finally finished on September 27, 1995 - a full 23 years after construction began.
- But Kolkata wasn't done dreaming. The line was gradually extended further south, reaching New Garia (now Kavi Subhash) by 2010. From a 3.4 km experimental line, it had grown into a 27 km lifeline for the city

The Modern Era and Underwater Miracles (2008-2025)

- In 2008, Prime Minister Manmohan Singh sanctioned the most ambitious project yet - the East-West Metro. This ₹4,874 crore project would finally fulfill the British dream of connecting Howrah and Kolkata via an underwater tunnel.
- The Kolkata Metro Rail Corporation (KMRC) was formed to handle this mammoth task. Construction began in 2009, but it wasn't easy. The project faced numerous challenges, including the infamous Bowbazar mishap in 2019 when tunnel boring hit an aquifer, causing buildings to collapse
- But persistence paid off. On February 13, 2020, the first section opened. Then, on March 6, 2024, Prime Minister Narendra Modi inaugurated the underwater section from Esplanade to Howrah Maidan. India finally had its first underwater metro tunnel - 52 feet below the Hooghly riverbed!

The Latest Milestone - August 22, 2025

- Just yesterday, on August 22, 2025, Prime Minister Modi inaugurated three game-changing metro extensions, adding 13.61 km to the network:
- Yellow Line (Noapara–Jai Hind Bimanbandar): After 41 years, Kolkata finally has a direct metro connection to its airport! The 7 km stretch reduces travel time from Esplanade to the airport from 90 minutes to just 30 minutes.
- Green Line (Sealdah–Esplanade): The missing 2.45 km link that completes the full 16.6 km East-West corridor. Travel time between Howrah and Sealdah has dropped from 40 minutes to just 11 minutes!
- Orange Line (Hemanta Mukhopadhyay–Beleghata): The 4.4 km extension connects Science City, hospitals, schools, and IT hubs.
- These new sections add 366 daily services and can carry 9.15 lakh additional passengers. The network now spans nearly 74 km with multiple lines operating simultaneously

Why English Remained Important

- While the British originally planned the metro, today's Kolkata Metro uses both English and Bengali signage. The stations display names in both languages, reflecting Kolkata's cosmopolitan heritage and the need to serve diverse passengers, including tourists and non-Bengali speakers.
- The metro's technical systems, safety protocols, and international collaboration (with Soviet, Hungarian, German, and Japanese partners) also necessitated English documentation. This bilingual approach makes Kolkata Metro accessible to everyone while preserving Bengali identity

A Network That Transformed a City

- Today's Kolkata Metro is far from that experimental 3.4 km line of 1984. It's a sophisticated network that:
- Operates India's first underwater tunnel
- Connects the airport directly to the city center
- Links major railway hubs in minutes instead of hours
- Serves over 6.5 lakh passengers daily
- Operates with fares as low as ₹5 and as high as ₹70
- Uses smart cards that work across all lines

The Legacy Continues

- From W.E. Crum's colonial dream in 1919 to Modi's inaugurations in 2025, Kolkata Metro represents 106 years of transportation evolution. It survived British hesitation, funding crises, political upheavals, engineering challenges, and a global pandemic to become India's most comprehensive metro system.
- The metro that started as an experiment is now a template for urban transportation across India. Cities like Delhi, Mumbai, Chennai, and Hyderabad have all learned from Kolkata's pioneering experience - both its successes and its struggles.
- What makes this story truly addictive is how a simple transportation project became a symbol of Indian resilience and innovation. Every time you descend into those air-conditioned coaches, remember - you're not just taking a metro ride. You're experiencing a piece of history that connects British colonial ambitions with modern Indian achievements, Soviet engineering with Bengali determination, and yesterday's dreams with today's reality.
- The next time someone asks you about Kolkata Metro, tell them it's not just India's first metro - it's a century-long love story between a city and its dreams of seamless mobility. And judging by the packed trains and expanding network, this love affair is far from over!
